Notes:

Cell shading:

White: Data provision is mandatory from 2021 (reference year 2019)

Light grey: The calculation of data is automatic. Can be edited after unlocking the cell with the button "Unlock formulas"

Light blue: provision of data is voluntary.

Light orange: Footnotes (only to be filled-in when relevant)

(*) For the purposes of reporting, data in category '4 Large equipment' shall be disaggregated into sub-category '4a Large equipment excluding photovoltaic panels' and sub-category '4b Photovoltaic panels'. Category '4 Large equipment' will automatically show up the summations of the categories 4a and 4b. If a reporting country is not able to distinguish data under sub-categories 4a and 4b, it shall complete the cells in the different columns in the aggregate line for category '4 Large equipment' only, superseding the formula.

(**) The collection rate referred to in Article 7(1) of Directive 2012/19/EU does not set individual collection rates for specific product categories. It refers to the national target to be achieved for WEEE for total amounts. From 2019, the minimum collection rate to be achieved annually shall be 65 % of the total average weight of EEE placed on the market in the three preceding years in the Member State concerned, or alternatively 85 % of total WEEE generated on the territory of that Member State. Please be aware that for the choice of declaration of WEEE collection rate with methodology A, based on POM (placed on the market), the value reported in cell W16 must result coherent with what you declare in sheet Quality Report, section 3.2.2. Please be aware that, for the choice of declaration of WEEE collection rate with methodology B, based on WEEE generated, the total amount of WEEE generated and the collection rate based on methodology B (cells K16 and cell AQ16 respectively) are mandatory.
